## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Garces et al. (U.S. Patent # 5,450,306) in combination with Tanaka Yoshiyuki (JP 2001057782).

Garces et al. discloses claimed invention a converter circuit (figure 2-3), including first and second energy storage element and second energy storage element connected in series (figure 2, item 6 and 8). However Garces et al. does not disclose the utilization of the technique for a fuse connected in series with first and second energy storage elements. Tanaka Yoshiyuki teaches the utilization of similar technique for a fuse connected in series with first and second energy storage elements. It would have been obvious one having an ordinary skill in the art at the time the invention made to modify Graces et al.'s converter circuit by utilizing the technique taught by Tanaka Yoshiyuki for the purpose of short-circuit protection.

Claims 3-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Garces et al. (U.S. Patent # 5,450,306) in combination with Tanaka Yoshiyuki (JP 2001057782) and further in combination with Deam et al. (U.S. Patent # 5,365,424) and. Shepard Jr. (U.S. Patent # 4,779,034)

Garces et al. in combination with Tanaka Yoshiyuki disclose the claimed invention as explained in the claims 1-2, above, except the utilization of the technique for two or more capacitor are connected in parallel and series combination, and a first drivable short-circuit element. Deam et al. teaches the utilization of the similar technique for series and parallel connection (figure 4, item C1-C6) and Shepard Jr. teaches the utilization similar technique for a first drivable short-circuit element (column 1, line 30-40). . It would have been obvious one having an ordinary skill in the art at the time the invention made to modify Graces et al.'s converter circuit by utilizing the technique taught by Tanaka Yoshiyuki for the purpose of short-circuit protection.

In regards to claim 6, Garces et al. in combination with Tanaka Yoshiyuki and further in combination with Bando et al. (U.S. patent # 5,099,409), discloses claimed invention (figure 1, item 4).

Claims 7-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Garces et al. (U.S. Patent # 5,450,306) in combination with Tanaka Yoshiyuki (JP 2001057782) and further in combination with Walker (U.S. Patent # 5,091,840).

Garces et al. (U.S. Patent # 5,450,306) in combination with Tanaka Yoshiyuki discloses claimed invention as explained in the claim 1-2, above except the utilization of the

technique for a second short-circuit element connected in parallel and drivable power semiconductor. Walker. teaches the similar technique for a second shorting element (figure 1, item 24). It would have been obvious one having an ordinary skill in the art at the time the invention made to modify Graces et al.'s converter circuit by utilizing the technique taught by Tanaka Yoshiyuki for the purpose of short-circuit protection.
